Abstract (en)

[origin: EP1069736A1] A method, apparatus and software program is provided for scheduling and admission controlling of real-time data packet traffic. Data packets are admitted or rejected for real-time processing according to throughput capabilities of a packet scheduler. A delivery deadline is determined for each payload data packet at the packet scheduler and packets are sorted into a time-stamp-based queue. Deadline violations are monitored, and an adaptation of payload data packets can be triggered on demand in order to enter a stable state. <IMAGE> <IMAGE> <IMAGE>
