Abstract (en)
[origin: WO2008082360A1] In a mobile telephone or terminal (1) owned by a user a launcher program can be run. The launcher program then shows a menu list (3) of items that are available through the mobile telephone or terminal. The user can select any of the menu items by manual input, the program then starting the operation corresponding to or associated with the selected item, such as starting an application in the mobile telephone or terminal or opening/displaying an Internet page. Each time when the launcher program is started it checks whether new menu information on which said menu list is based is available and if available, it replaces or updates the menu information stored in the mobile telephone or terminal with said new menu information. It may also check whether a new version of the launcher program itself is available and if available, it can install the new version in the mobile telephone or terminal. For the updates, the mobile telephone or terminal may connect to an application server (31, 43) that has a storage in which current menu information and/or the latest version of the launcher program is/are stored.
