Abstract (en)
A chair comprising two ribbed supporting sectional elements (12) set at a distance from one another in a transverse direction and connected to a base (22, 24) by means of a transverse supporting element (20), wherein each of said ribbed supporting sectional elements (12) is basically L-shaped, with a seat portion (12a), a backrest portion (12b), and a rounded radiusing portion (12c) between the seat portion (12a) and the backrest portion (12b), wherein extending between said supporting sectional elements (12) is a material basically in the form of a sheet (42, 62), which forms a seat (42a, 62a) and a backrest (42b, 62b), and wherein each of said ribbed supporting sectional elements (12) is provided with a plurality of through notches (48) set at a distance from one another in a longitudinal direction, which form respective points of localized bending, which enable bending of the supporting sectional element (12) in a vertical plane, said notches (48) distanced from one another by respective stretches (50) substantially rigid to bending in said vertical plane.
