Abstract (en)
[origin: EP2110306A2] The catamaran has a frame (4) for detachably connecting two hulls (1) with each other, and for carrying plug-in noses (3) which engage in plug-in receptacles (2) of the hulls. Each plug-in nose comprises a guide tube (17) with a rubber-elastic clamping ring (18) that encloses the guide tube on the outside. The clamping ring rests on an axial abutment (23), and is subjected to axial pressure by an actuator (22) penetrating the guide tube. The clamping rings are held at an axial distance from each other by a support sleeve (19) that is held on the guide tube in a displaceable manner.
