Abstract (en)

[origin: EP2110329A2] The packaging machine (1) has a registration unit, particularly a login unit (13,16) for the registration and examination of the personal access authorization. One of the registration units comprises a reading unit for receiving wirelessly or contactlessly conveyed information of wirelessly or contactlessly selectable, portable data carriers (12,18). An alternative input unit is provided for wired input of information. The reading unit is formed as a Radio frequency identification station for information transfer with a radio frequency identification transponder unit. An independent claim is included for a data carrier for storage of information and for the acquisition of the access to a packaging machine.
