Abstract (en)
[origin: WO2008098950A2] A fire protection system (1) comprises a container (2) being filled with a fire extinguishant (3) and containing a detonator, and at least a fuse (4) for guiding activating energy to the detonator. The fuse (4) is arranged at the external side of the container (2) such that the fuse (4) divides said external side in more than two portions as seen in at least one circumferential direction of the container (2). The fuse (4) is a single fuse (4). The fuse (4) can be wound around the container (2) such that the container (2) is provided with more than one fuse windings, which at least partly follow different paths on the external side of the container (2).
