Abstract (en)

[origin: WO2008089922A1] The invention relates to a method for installing a patch (62) in a smart card module, wherein a loading routine (38) is used to load a dummy application (50) containing the patch (62) into the smart card module. An installation routine (52) contained in the dummy application (50) is called in, said installation routine informing the patch (62) of a patch routine (40) contained in system programs (26) of the smart card module to install the patch (62) in a location outside the dummy application (50). The technique according to the invention can be used to install the patch (62) in the field with little complication and only slight modifications to existing components and structures.
