Abstract (en)
[origin: WO2008086867A1] The invention relates to a cable organization device (10) with a body (12) formed of resilient material. The body comprises cavities for holding the cables (20). Each cavity (20) comprises a cable holding section (22) for accommodating a cable, and a relatively small input section (24). The cable can be introduced in the respective cavity (20) through the input section in that the input section is opened with resilient deformation by the sections (26) of the cable defining the input section.
