Abstract (en)

[origin: EP2111955A1] The apparatus has a raising device (4) displaceable relative to a cutting table (1) receiving a web (5). A lifting device (14) is provided at a distance above the table. The lifting device has a receiver adjusted to the length of a boundary section (16) of a cutting (6) facing the raising device. The receiver holds the received boundary section in a transfer position lifted off from the table. The raising device is displaceable between the lifting device and the web resting on the table. A tape (10) is applied to a bottom side of a support (12) comprising ferromagnetic material.
