Abstract (en)
[origin: EP2112078A1] The box (1) has a cover part (6) hinged at a rear side wall (4), and provided on an intermediate wall (7) in an end position in a flat manner. An insertable tongue (8) is rigidly formed at a cover part for closing the folded box, and is inserted into an insertion opening arranged on the intermediate wall by a movement along a support surface formed by the wall (7). A locking component e.g. detent (10), is formed such that the component is brought into a locking position during movement of the cover part. The detent is arranged on a lower side of the cover part turned towards the wall (7).
