Abstract (en)  
[origin: EP2112116A1] In an elevator safety apparatus, a bearing rail stopper and a pivoting rail stopper are disposed in a housing that is displaceable horizontally relative to a car. A guide rail that guides the car is disposed between the bearing rail stopper and the pivoting rail stopper. A distance between the bearing rail stopper and the pivoting rail stopper is reduced by vertical pivoting of the pivoting rail stopper. The housing can be displaced by a displacement driving mechanism in a direction in which the pivoting rail stopper contacts or separates from the guide rail. The guide rail can be gripped between the pivoting rail stopper and the bearing rail stopper by the pivoting rail stopper being pivoted in a direction that corresponds to a direction of movement of the car while contacting the guide rail.
