Abstract (en)

[origin: DE102008020355B3] The module (14) has a pair of side panels, where one of the side panels lies opposite to the other side panel in a given distance and the distance between the side panels is changeable. The former side panel sets width of a steam chamber with the latter side panel. A transportation unit (24) moves textiles (20) e.g. trousers, between the side panels by the steam chamber, where volume of the chamber is adjusted related to dimensions of the textiles. A humidification unit e.g. vapor nozzle, is attached to the side panels for moistening the textiles. An independent claim is also included for a tunnel finisher for treatment of textiles.
