Abstract (en)

[origin: EP2112431A1] The present invention relates lamp adjustment in a light fixture, where a lamp socket from the backside of a reflector is adjustable by screwing means in one or more directions. It is an object of this invention to perform effective independent adjustment of a light source in relation to a reflector. The lamp socket is adjustable in three directions by independent adjusting means, where a first adjustment in a first X direction is performed by tilting first inner ring by first screwing means, where a second adjustment in a second Y direction is performed by tilting a second middle ring by second screwing means, where a third adjustment is performed by a linear translation of a third outer ring by third screwing means in relation to a surrounding frame.
