Abstract (en)
[origin: EP2112454A2] The device has a storage container (2) that is closed from outside from an outlet closure, for storing an immersed body (4), and an extruding unit for extruding the immersed body from the container even during opening of the closure. A piston (14) or a cylinder (12) is movable against the closure by a piston-cylinder arrangement (10), where the piston is movably coupled with the immersed body. A cover (22) is hinged at the storage container. The cover is elastically prestressed in a closing direction. The piston is coupled with a cutting tool.
