Abstract (en)

[origin: WO2006057600A1] The present invention relates to a device for containing and dispensing tablets arranged in blister packs, the device comprising a base part (10) having a compartment (12) with walls and a bottom arranged to contain at least one blister pack. The invention is characterized by a lid (22) pivotally arranged to said base part and capable of opening and closing said compartment, a dispensing unit comprising a protrusion (24) arranged to said lid and a first opening (18) arranged in said base facing towards said lid, wherein, when the lid is open, a blister can be positioned over the cavity, and when the lid is closed, the protrusion is arranged and positioned such that it expels a tablet from the blister into said first opening.
