Abstract (en)
Packaging for food products. It comprises a base receptacle (2), made of a rigid material, a closing mesh (3) and joining means (4) between the mesh (3) and the base receptacle (2) in an area (5) adjacent to the latter's edges (6), the closing mesh and the base receptacle being joined without interruption, thereby determining a single space for the lodging and containment of the food products (22) in the packaging (1), which is endowed with a laminar layer (23) made of a humidity- and shock-absorbing material, placed, at least in the interior of the base receptacle (2), adjacent thereto. The laminar layer (23) is made of a material selected from a group formed by: polymeric foam, for example polyurethane; CSC-type non-woven fabric made of PP; and plasticised cellulose.
