Abstract (en)  
[origin: EP2113480A2] The impression roller (11) comprises a product deceleration recess, which is formed in interaction with a number of cams (10) arranged on a cam shaft (9). A number of exchangeable periphery segments (30) are arranged on the impression roller. Another number of periphery segments are provided, which comprises multiple periphery segments divided along the axis of the impression roller. An independent claim is included for a periphery segment comprises a number of cams arranged on a cam shaft.
