Abstract (en)

[origin: EP2113592A1] The machine has a rocker (13) rotatably supported around a rotating center (15) and to which a swivel drive (6) is assigned in order to transfer a rotating movement. The rotating center is fixed by an eccentric adjusting device (17) for adjusting the center with respect to the swivel drive. An adjusting gear wheel (22a) is connected with the adjusting device and stays in contact with an adjusting gear rod (23a) to which a linear adjusting drive (29) is attached. The drive has a linear motor (26) which is fixedly mounted on a machine frame.
