Abstract (en)
[origin: EP2113637A2] The compressor has a stator blade row comprising a blade (8) that is designed as a rotating unit (6), where the rotating unit has a drive shaft (10) and supported in a housing (2). The rotating unit is rotatable completely around a drive axis (26) of the blade by a drive (11) and the drive shaft, where the drive axis is aligned perpendicular to a rotational axis (27) of the axial compressor. The blade is connected with a tilting motor, and a bar leads from the housing to an inner shroud to form a closed area with the blade for the compression of gas.
