Abstract (en)

[origin: EP2113654A1] The laminate (1) has an injection nozzle holder (2) comprising upper and lower sections (10a, 10b) formed by spanner surfaces (9). The injection nozzle holder is inserted in a fork opening formed in forked bracket arms (11a, 11b) of a clamping jaw (5) transverse to a longitudinal axis (8). A clamping screw (6) clamps the clamping jaw, and a safety element (7) engages the injection nozzle holder in a utilizing direction (14). The safety element holds the forked bracket arms in a position between the upper and lower sections of the injection nozzle holder.
