Abstract (en)

[origin: EP2113661A1] The damper (20) has a housing (15) provided with a line connection (5) for attaching a supply line. The housing has a base element (4) and a cover element (1) that are connected with a casing (7) for enclosing a retaining area (16), where the casing is designed in an elastically deformable manner. A diaphragm is arranged in the retaining area for dividing the retaining area into a set of separated partial areas, where a volume of the retaining area is changeable. A measuring connection (2) for measuring instrument e.g. manometer, is arranged in the cover element. An independent claim is also included for a system for supplying for hardening suspension.
