Abstract (en)

[origin: EP2113718A2] The roller (1) has a combustible support surface mounted on a metallic hollow structure (2) forming a cylindrical cage, and a passage pipe (3) for allowing passage of cooling fluid. A series of hollow rings (6) is coaxial to an axis and is distributed on length of the roller, where each ring is provided with a fluid inlet (7) and a fluid outlet (8). Inter-ring bridges (9) connect the fluid outlet of the ring to the fluid inlet so as to form cooling fluid passage circuit wrapped around the structure.
