Abstract (en)
[origin: EP2113734A2] The device has a clamping slider (6) movably arranged at a closure housing (1). The clamping slider is connected with a clamping lever (7) for clamping and/or releasing a main spring (4) attached to a striking piece (2). The clamping slider has a rear resting unit for engaging in an anti-resting unit fixedly arranged at the closure housing for holding of the clamping slider in a clamping position. A reset spring i.e. compression spring (42) is engaged at the clamping slider such that the clamping slider is automatically moved back into a release position after striking of the striking piece.
