Abstract (en)

[origin: EP2113930A2] The ring (1) has a carrier ring (5) with a groove (9) i.e. dovetail groove, and an induction coil (3) arranged in the groove. The induction coil is fixed at a device component i.e. connector housing (2). The carrier ring has a horizontal upper section (6) and a lower section (7), where are encompassed at 180 degrees. The sections are made of isolating plastic material, in which a wire winding (10) is fixed. A coil wire is made of wire winding sections radially demountable with the upper and lower sections. The wire winding sections consist of round or flat copper wire.
