Abstract (en)

[origin: EP2113971A1] An electrical connector (13) for a power distribution track, comprising a base plate (14) which engages with the track, and a contact head, pivoted on said base plate and formed by a central body (15) with two identical wings (16, 17) which have axial symmetry with respect to the axis of rotation of the contact head and each of which forms an identical plurality of housings (18) allowing the removable insertion of an electrical connection device (19) into each housing, in such a way that the connector can be connected to the track in two different orientations which are rotated through 180° with respect to each other.
