Abstract (en)
[origin: WO2008095753A2] Disclosed is a telescopic pull-out arrangement for a refrigerator, comprising two telescopic pull-out mechanisms which are each provided with a rail (8) that is stationary on a common frame and at least one movable rail (9), and a storage part (3) which is retained on the movable rails (9) by means of at least one couple (13, 14) of adapters (13, 14) that resemble each other. The storage part (3) has a first engagement contour (35) which cooperates with a first adapter (14) of the couple (13, 14) and a second engagement contour (35) that cooperates with the second adapter (13) of the couple (13, 14). Each adapter (13, 14) is provided with a third (28) and a fourth engagement contour (21). The first engagement contour (35) of the storage part (3) and the third engagement contour (28) of the first adapter (14; 16) engage into one another, while the second engagement contour (35) of the storage part (3) and the fourth engagement contour (21) of the second adapter (13) engage into one another. The engagement of the first and third engagement contour (35, 28) has less tolerance transversal to the pull-out direction than the engagement of the second and fourth engagement contour (35; 21).
