Abstract (en)
[origin: WO2008107121A2] The invention relates to a container for the transportation, storage, and supply of fluids and to a holder for attaching the container to a vertical surface. The container has an approximately cubic shape and includes on the rear thereof a molding in the shape of a projection that may be hung in a holder, on which the container is then fixed without tools. The molding has a shape and size that allow the container to be securely fixed to the holder even when it is completely full. The container may also be placed on the floor using a standing surface and will remain standing there securely.
