Abstract (en)

[origin: WO2008089948A2] The invention relates to a closure for filling and sealing receptacles containing medicinal fluids, a method for filling a receptacle with a medicinal fluid and sealing the receptacle. Said closure is used in said method and comprises a mounting piece (3) which may be attached to the receptacle and a connector piece (5) which may be connected to a connector piece of a filling device. A closure body (6) is arranged between the mounting piece and the connector piece, in which a closure piece (8) for sealing the closure sits. The closure piece (8) may be slid between a position sealing the closure and a position which opens the closure. The closure is sealed tight with a removable protective cap (2). Said method is characterised in that with the protective cap removed the receptacle is filled through the closure in a clean room, whereupon after filling, the closure is sealed by pressing the closure piece into the closure.
