Abstract (en)

[origin: CA2677286A1] The invention relates to a closure cap for a container for receiving medical liquids, in particular a BFS vial which is produced by a blow-fill-seal process, and to a BFS container with such a closure cap. The closure cap (1) according to the invention has a cover part (2) and an edge part (3), with an injection part (A) arranged in the cover part. The injection part (A) has an outwardly directed connection part (6) with a conical recess (7) for receiving the cone stem of a needleless injection syringe in a seal-forming manner, and an inwardly directed closure part (14) which has a self-sealing membrane (16) for closing the recess (7) of the connection part. The self-sealing membrane (16) is slotted. The closure cap according to the invention allows a liquid to be injected without use of an injection needle.
