Abstract (en)

[origin: WO2008075189A1] A fixing device (1) for catheters (2) or medical probes is described, in particular catheters for peridural and/or spinal anaesthesia, formed essentially of a sheet element (3) having an adhesive side (4) for fixing a respective catheter (2) onto the skin of the patient and provided with through openings (6) suited to be engaged by the catheter (2) in such a way as to define a tie between the sheet element (3) and the catheter (2) itself.
