Abstract (en)  
[origin: WO2008100417A2] The present invention is directed to a construction system which has individual construction elements or components which can be connected to each other by at least a ball-to-socket joint or a socket-to-socket joint. A basic construction element has a body with a ball at one end and a socket at the other end, or balls at both ends, or sockets at both ends. Other construction elements are contemplated which can have more than or less than two connectors for a single element.
