Abstract (en)

[origin: FR2911860A1] The machine has a work station (1) comprising an immobilization device (3) for immobilizing a part (21) of a complex web (2) during a preset time without modifying tension of web and speed of unwinding of parts (22, 23) of the web. The web is located in an operational zone of the work station. The parts (22, 23) are respectively located upstream and downstream of the station. The device has rollers (31, 34) driven by a cam (37).
