Abstract (en)

[origin: WO2008088837A2] The present invention is directed to a composition that includes a functionally active, individual HLA trimolecular complex expressed on the surface of an immortalized, non- human cell line. Methods of obtaining high expression of the transferred HLA molecule, as well as assays that utilize such recombinant cell line as a platform, are also disclosed. Methods of purifying HLA from such recombinant cell line and methods of using the purified HLA to detect or remove anti-HLA antibodies are also disclosed.
