Abstract (en)

[origin: WO2008092498A1] The invention relates to a drive apparatus (1) for a hinged gate or swing gate, comprising a drive (4) and an operating element, which can be actuated by means of the drive (4), for closing and opening a leaf (2) of the hinged gate or swing gate, and comprising a control unit (5) for controlling the drive (4). The control unit (5) has an associated input unit by means of which the length of the gate leaf (2) can be input as an input parameter. The other parameters which are relevant for operating the hinged gate or swing gate are automatically derived from the input parameter in the control unit (5).
