Abstract (en)

[origin: WO2008088268A1] The invention relates to a ladder with two side legs (1,2) and at the foot end of one of the side legs (2) an extension leg (5), which is slidably mounted in a holding device (4) attached to said one side leg (2), which holding device is provided with a locking device (13) that prevents a sliding downwards of the one side leg when the ladder is loaded, and a manually operated release device for permitting adjustment of the extension leg (5). The locking device is, according to the invention, designed to lock the extension leg (5) in both directions, and the extension leg is provided with a device (6) for detachable interconnection with a lateral tilt protecting device (9), which further is provided with a device (10,11) for detachable interconnection with the foot end of the other side leg (1).
