Abstract (en)  
[origin: DE102006040147A1] The system (1) has a heat engine (8) with a fluid-circuit having two reservoirs (9, 10) thermally connected with a solar heat energy source (2), geothermal energy source (3), house heating energy source(4), ground heat sinks (5, 6) or heating reverse heat sink (7). An operating temperature difference between the reservoirs of 10 to 200 degrees is adjusted with an operating temperature of 30 to 280 degrees. The engine has a hybrid-motor (11), where a pressure difference of a fluid is utilized to a drive based on the operating temperature difference in the hybrid motor and a fuel is burned. An independent claim is also included for a method for operating a house power supply system.
