Abstract (en)  
[origin: WO2008079822A2] A data processing apparatus (200), comprising a processor (204), a memory (202) and a user interface (210) is described. The data processing apparatus is configured to present to a user via the user interface a plurality of options indicative of a different state a user application operative on the data processing apparatus can have. The data processing apparatus is configured to receive via the user interface a user selection of one of the plurality of options and to respond to a user selection to establish a user identity in the user application and to automatically set the state of said user application in accordance with the selected option.
