Abstract (en)  
[origin: WO2008090057A1] A tachograph (TCO) comprises at least one chip card reading unit (CKLE). At least one chip card (CK) with secure memory (MEM\_CK) and secured data transmission can be fed to the at least one chip card reading unit (CKLE). On the at least one chip card (CK), at least one user-defined piece of identification information is securely stored which is independent of a specified piece of identification information for a specified operation of the tachograph (TCO). The tachograph (TCO) is constructed so as to authenticate the at least one chip card (CK) in accordance with the at least one piece of user-defined identification information, and to read data securely from the at least one chip card (CK) and/or to store data securely on the at least one chip card (CK).
