Abstract (en)  
[origin: WO2008092830A2] The invention relates to a positioning device for crimping tools. Such positioning devices are suitable for the positioning of an element that is to be pressed relative to the pressing elements of the crimping tool, which are formed by notching elements, crimping plungers or the like. According to the invention, the positioning device (OI) comprises a support head (03) which is rotatable with respect to the crimping tool (02, 23). A plurality of positioning elements (11, 12) are peripherally arranged in said support head and can be individually displaced in an axial manner in the direction of the crimping tool (02, 23) between an initial position and a working position. The invention also relates to a crimping tool, for example a crimping pliers or a crimping insert for a crimping machine.
