Abstract (en)

[origin: EP2116315A1] The roller leveling machine (11) has an upper rolling chair (13) with multiple upper direction rollers, and a lower rolling chair (15) with multiple lower direction rollers. The upper or lower direction rollers are propelled, and a drive is provided over drive shafts (23'), which are connected with the associated direction roller at one of their ends and are connectable at their other end by detachable clutches with a transfer case (35). Another transfer case (65) is provided, which is connectable in place of former transfer case with a changing casket (16').
