Abstract (en)
The invention concerns a support (21) for the sliding rollers (20) of a sectional door (11) made up of several panels (12) connected to each other by means of hinges (13) and movable between a closed and an open position along lateral guide tracks (14) with a slanting arrangement with regards to the vertical position. The support (21) comprises a body (22) which has a base plane (23) provided with means to be applied to the panels of the sectional door and with at least a plurality of bores (26) parallel to each other, each at a different distance from said base plane (23) and each one designed to selectively receive a rotation pin of a sliding roller (20).
