Abstract (en)

[origin: WO2008101078A2] A device fixation tool and method of fixation of a medical device within a hollow organ or cavity through a natural orifice includes providing a needle driver and a shaft. The needle driver is adapted for use with at least one needle. At least a portion of the needle driver is positioned with the shaft at a hollow organ or cavity through the natural orifice. Sufficient force is transmitted with the needle driver to the at least one needle to penetrate mammalian tissue and a portion of the medical device. The portion of the medical device may have a greater puncture resistance than the mammalian tissue.
