Abstract (en)
  [origin: WO2008095484A2] The invention relates to a lid for a container and to a container with a corresponding lid, the outer radial edge region
  (8) of said lid (2) having an opening (9), through which a tool that acts as a lever can pass and said lid (2) being provided with a rim (10) below the
  opening (9), under which the free end of the levering tool engages with the lid (2), lifting the latter at least partially off the container (1) by being
  pivoted against the rim (10) of the lid (2). The edge of the opening (9) comprises at least one part (11) that can be torn or broken off from the lid (2)
  when the tool is introduced into the opening (9) or when the lid is taken off. This allows the provision of a lid or container comprising a lid with an
  indicator which clearly identifies whether the lid has already been lifted off the container or detached from the latter.
