Abstract (en)  
[origin: WO2008099054A1] The invention relates to an oil boom comprising two adjacent elongated floats (1) and between them an elongated and vertical separating wall (2). In accordance with the invention, the floats (1) are accordion-folded air-tight tubes provided with a spiral spring (3), the separating wall (2) is formed by a flexible cape which can be folded into compressed position and extended in the longitudinal direction, and the oil boom comprises a set of body frames (4) with support members (5) for the floats and a support structure (6) for the separating wall arranged to hold the separating wall in the vertical position in the middle between the floats and at a distance from both of them.
