Abstract (en)

[origin: US8033773B2] A parking facility for motor vehicles having fixed parking places arranged above each other and each having a guide for a pallet that is displaceable along the guide as well as a lift, which is disposed alongside the fixed parking places and which also carries a guide for the pallet is provided. For displacement of the pallet between the respective guides of a parking place and the lift, the lift is stopped alongside a parking place such that the respective guides are aligned with one another. The guide of the lift at its end facing the parking place is supported on a supporting surface connected to the parking place. The guide of the lift after being set down onto the supporting surface is pivoted about a horizontal pivotal axis until the guide of the lift is in a horizontal position.
