Abstract (en)
[origin: DE202007000497U1] The adjustment fitting has adjustment elements in the form of catch projections (28) as well as locking section (1) from which a rigid frame (29) and other items are adapted to a wing of a window or door and in which the direction of the folding areas are movable relative to one another. The catch projections and locking section are located behind one another in a gripping position in the direction of the folding areas' extending grip surfaces (8). The locking section has a base body (2) and an upper section (3). The base body and the upper section are lockably connected together, with the base body surrounding the upper section perpendicular to the direction of the folding areas. The base body may be longitudinally symmetrical and have a central through-bore (19) for a fixture screw (40).
