Abstract (en)

[origin: DE102007001927B3] The window (1) or door has a corner bearing (4) including a counter bearing (6) with a counter bearing base (5) provided with a counter bearing projection, which engages in a fixed frame (3) in a vertical direction by a fixed frame opposite side (22) that is opposite to a fold side of the frame. A bearing projection is supported over the bearing (6) against tilting to an opening side of the frame. The counter bearing projection overlaps with the bearing projection at a side in the direction. The base is supported at the opposite side against a misalignment by the opening side at the frame.
