Abstract (en)
[origin: WO2008098623A1] A device for operating sliding panels of gates and the like, comprising: a panel (2) provided with wheels (12) slidable along a guide (4) fixed to the ground, at least one upright (24) bounding the passageway closable by said panel, electromechanical means for driving said panel (2) along said guide, a control unit (26), a low voltage direct current electric motor (10) which can be mechanically coupled to at least one of said wheels (12), a power supply battery (18), characterised in that the control unit (26), the electric motor (10) and the power supply battery (18) are housed inside a longitudinal member (8) fixable to the panel, and by further comprising: a first connector (42) mounted on said panel and connected to said control unit, a second connector (44) powered by external power and coupled to said first connector for any position of the panel.
