Abstract (en)
[origin: WO2008093270A2] In a medical communication method, two or more persons are identified as having a selected medical condition or characteristic. At the residence of each identified person, a video conference-enabling unit (56) is operatively connected with a consumer electronics device (50, 52) disposed in the identified person's residence. A video conference is conducted between at least two of the two or more identified persons using their respective consumer electronics devices (50, 52) and video conference-enabling units (56).
