Abstract (en)

[origin: WO2008063518A2] A system and method for remotely controlling field devices are provided. The system may include an input device configured to receive a user input indicative of a user selection of a field device setting and a first trigger condition. The system may also include a processor in communication with the input device, the processor configured to produce a first field command signal based on the user selection received by the input device, and responsive to an occurrence of the first trigger condition, to cause the first field device command signal to be transmitted to the first field device. The system may include a display in communication with the processor, the display configured to display a graphical user interface showing a schedule for first field device setting changes which is based at least in part on the user selection received by the input device.
